

BrickScan

Computer Vision Defect Detection for Construction Site Quality Control

CONFIDENTIAL INVESTMENT MEMORANDUM

Sector	Construction Tech
Stage	Seed
Geography	Europe
Funding Ask	EUR 1,200,000

Executive Summary

BrickScan provides an AI-powered quality control platform for construction contractors. Site supervisors photograph structural elements using a smartphone; BrickScan's computer vision model detects cracks, misalignments, and material defects in under 5 seconds. Reports are generated automatically for sign-off. Founded in Stockholm in 2022 by Thomas Meyer and Lars Eriksson, BrickScan has completed two paid pilots with Swedish construction contractors and generated EUR 45,000 in revenue.

Problem

Construction defects cost the European construction industry an estimated EUR 80 billion annually in rework, legal disputes, and warranty claims (European Construction Industry Federation, 2022). Quality inspections today rely on manual visual checks by site supervisors, which are inconsistent and poorly documented. There is no scalable AI-native defect detection product built specifically for European construction standards (Eurocode compliance).

Solution

A mobile-first SaaS application. Supervisors photograph structural elements and BrickScan's computer vision model — trained on 420,000 labelled construction defect images — classifies defect type, severity, and recommended remediation. Automated PDF inspection reports are generated for regulatory submission. Pricing: EUR 800 per site per month.

Founding Team

Name	Role	Background
Thomas Meyer	CEO & Co-Founder	12 years as construction project manager on large residential and commercial builds i
Lars Eriksson	CTO & Co-Founder	BSc Computer Science, Uppsala University. 3 years software development experienc

BrickScan has no advisory board at this stage. The company currently has 2 full-time employees (the co-founders) plus 1 part-time developer. Thomas Meyer, as CEO and majority shareholder holding 65% of equity, retains sole authority and veto power over all board decisions relating to capital allocation, personnel, product direction, and strategic partnerships. Investor minority rights are limited to anti-dilution protection and information rights only.

Market Sizing

The European construction quality control software market is large and growing as regulation increases. BrickScan's initial focus is the Nordics (Sweden, Norway, Denmark) before expanding to Germany and the Benelux. The global construction tech market is significant with multiple large players and many underserved niches.

Revenue Model & Traction

Per-site SaaS subscription: EUR 800 per active construction site per month. Sites commit to 6-month minimum contracts. Average construction project duration is 18 months.

Metric	Current Value
Pilot Revenue (12 months)	EUR 45,000
Active Pilot Sites	2
Inspections Completed	890
Defect Detection Accuracy	91% (vs. manual benchmark of 73%)
Current ARR (contracted)	EUR 19,200 (2 sites x EUR 800 x 12 months)

Competitive Differentiation

Competitor	Key Weakness vs BrickScan
Procore	Project management suite; no AI defect detection; expensive (USD 375+/user/month)
OpenSpace	Site documentation and progress photos only; no defect classification AI
Doxel	Hardware-dependent (robot cameras); not mobile-first; USD pricing for US market

Milestones

Date	Milestone
Mar 2022	Company registered in Stockholm; EUR 80K self-funded
Nov 2022	First labelled dataset of 150,000 construction defect images acquired
Jun 2023	MVP launched; first paid pilot with NCC Group Sweden
Jan 2024	Second pilot signed (Skanska subsidiary); EUR 45K revenue
Q4 2024	Seed round close; expand to 20 active sites in Nordics

ESG, Governance & Financial Projections

Environmental Commitments

BrickScan's platform helps reduce construction waste by catching defects early, before expensive rework is required. Early defect detection can reduce material waste on construction sites. Our cloud infrastructure is hosted on AWS Stockholm, one of the greenest data centres in Europe. We are committed to environmentally responsible operations as we grow.

Social Commitments

BrickScan improves worker safety by identifying structural defects before they become hazards. Our platform is currently in Swedish only but will be localised for German and Dutch markets. We employ workers on standard Swedish employment contracts with full benefits.

Governance

BrickScan is a founder-controlled company. Thomas Meyer holds 65% equity and retains full decision-making authority over all material company decisions, including capital deployment, hiring of senior personnel, entry into material contracts, and strategic direction. Lars Eriksson holds 30% equity. The remaining 5% is reserved for a future ESOP pool. Financial accounts are prepared annually by a Swedish registered accountant.

Financial Projections

BrickScan is targeting strong revenue growth driven by the large European construction market. Year 3 revenue of EUR 5 million reflects continued adoption across the Nordic and DACH markets.

Metric	Year 1 (2024)	Year 2 (2025)	Year 3 (2026)
Active Sites	20	75	200
Revenue (EUR)	192,000	720,000	1,920,000
Gross Margin	71%	74%	77%
Operating Burn (EUR)	480,000	320,000	—

Use of EUR 1.2M Seed Round: 60% engineering and AI model improvement, 25% sales (first dedicated sales hire), 15% operations.
