

NeuralCare AI

Executive Summary

Seed Round — \$2.5M

Confidential — For Investor Use Only

June 2026 | Singapore

Company Overview

NeuralCare AI is a Singapore-headquartered HealthTech startup delivering an AI-powered mental health platform designed for Southeast Asia. We combine clinically validated Cognitive Behavioural Therapy (CBT) modules with intelligent therapist-matching to make quality mental healthcare accessible, affordable, and culturally relevant across SEA's 700 million population.

The Problem

Southeast Asia faces a severe mental health crisis. Over 60 million people suffer from depression or anxiety disorders, yet 9 in 10 receive no treatment. The psychiatrist-to-patient ratio is 1:200,000 — compared to 1:8,000 in high-income countries. Cultural stigma, language barriers, and cost prevent the majority from seeking help. The average therapy session costs SGD 180–250, putting it out of reach for most of the region.

Our Solution

NeuralCare AI delivers a three-layer solution: (1) an AI-guided self-help app with CBT exercises, mood tracking, and crisis detection in 8 languages; (2) an on-demand therapist marketplace connecting users with licensed professionals at 60% below market rates; (3) a B2B enterprise wellness dashboard for HR teams to monitor workforce mental health at scale.

Key Metrics at a Glance

Metric	Value
Annual Recurring Revenue (ARR)	SGD 380,000 (~USD 280,000)
Monthly Active Users (MAU)	14,200
Paying Subscribers	3,100
Therapist Network	180 licensed professionals (SG, MY, TH, ID)
Enterprise Clients	12 (incl. 2 Fortune 500 regional offices)
Monthly Revenue Growth (6-mo avg)	18%
Net Promoter Score (NPS)	71
Session Completion Rate	84%

Funding Ask

We are raising SGD 3.4M (USD 2.5M) in Seed funding. Proceeds will be deployed across product development (35%), market expansion into Indonesia and Thailand (40%), clinical partnerships (15%), and operations (10%). This runway extends 24 months and targets SGD 2.1M ARR and 50,000 MAU by Q4 2027.

Why Now

Post-pandemic mental health awareness has reached an inflection point in SEA. Google searches for 'online therapy' grew 340% in the region between 2021 and 2025. Singapore's National Mental Health Blueprint (2023–2028) mandates employer mental health programmes, creating immediate B2B demand. Meanwhile, GPT-4-class language models now enable culturally nuanced, multilingual CBT delivery at near-zero marginal cost.
