

NeuralCare AI

Business Plan

FY2026–FY2028

Confidential — For Investor Use Only

June 2026 | Singapore

Mission & Vision

Mission: To make evidence-based mental healthcare accessible to every person in Southeast Asia, regardless of income, language, or location.

Vision: To become the default mental health infrastructure layer for SEA — powering consumer apps, employer programmes, and healthcare systems alike.

Business Model

NeuralCare operates three revenue streams:

Stream	Model	Price Point	FY2026 Revenue Sha
B2C Subscription	Monthly/Annual SaaS	SGD 19.90/mo or SGD 179/yr	42%
B2B Enterprise	Per-seat annual licence	SGD 72/employee/yr	38%
Therapist Marketplace	15% commission per session	SGD 90–120/session	20%

Go-to-Market Strategy

Phase 1 (2025–2026) — Singapore Beachhead: Establish product-market fit in Singapore. Partner with 3 corporate HR platforms (Workday, Infor, SAP SuccessFactors resellers). Run clinical validation study with NUS Yong Soo Lin School of Medicine.

Phase 2 (2026–2027) — Regional Expansion: Launch localised apps in Bahasa Indonesia and Thai. Partner with Malaysian Employers Federation and Indonesian Ministry of Health digital wellness initiative. Target 10 large Indonesian enterprise clients through Gojek and Tokopedia HR channel partnerships.

Phase 3 (2027–2028) — Platform & API: Open NeuralCare API to third-party health apps. Launch white-label product for insurance companies. File for regulatory approvals as a Class I medical device under Singapore HSA and Indonesia BPOM.

Operational Model

NeuralCare operates an asset-light model. All therapists are independent contractors onboarded through a rigorous 3-stage credentialling process (licence verification, skills assessment, supervised sessions). Clinical oversight is maintained by our Medical Advisory Board, chaired by Dr. Tan Wei Ling (former MOH Singapore Chief Psychiatrist). Infrastructure runs on AWS Singapore with data residency compliance for each market.

Key Milestones — 24-Month Roadmap

Quarter	Milestone
Q3 2026	Close SGD 3.4M Seed round; hire Head of Indonesia & Head of Clinical
Q4 2026	Launch Indonesian Bahasa app; sign 5 new enterprise clients

Q1 2027	Reach 25,000 MAU; publish NUS clinical validation results
Q2 2027	Launch Thailand; onboard 300 therapists across 5 countries
Q3 2027	Hit SGD 1.6M ARR; begin Series A preparation
Q4 2027	SGD 2.1M ARR; 50,000 MAU; file HSA Class I device application

Risk Factors & Mitigations

Risk	Likelihood	Mitigation
Regulatory change on digital health	Medium	Engaged MCI advisory panel; modular compliance architecture
Therapist supply constraint	Medium	University partnerships (NUS, NTU, UM) for fresh graduates
Competition from well-funded global apps	High	SEA language + cultural advantage; local clinical credibility
AI model hallucination in crisis scenarios	Low	Hard-coded crisis escalation; no AI substitutes licensed therapy
Data breach / privacy incident	Low	ISO 27001 in progress; data never leaves country of origin
