

NeuralCare AI

Market Research & TAM Analysis

Southeast Asia Mental Health Technology

Confidential — For Investor Use Only

June 2026 | Singapore

Market Context

Mental health disorders are the leading cause of disability-adjusted life years (DALYs) in Southeast Asia, accounting for 13% of total disease burden (WHO, 2024). Despite this, the region allocates less than 1% of national health budgets to mental health. This structural gap represents an extraordinary commercial opportunity for technology-enabled care delivery.

Total Addressable Market (TAM)

Geography	Population (M)	Diagnosed MH cases (M)	Digital health penetration (%)	TAM (USD B)
Singapore	6	0.54	78%	0.31
Malaysia	34	3.06	52%	0.88
Thailand	72	6.48	45%	1.62
Indonesia	278	25.0	38%	5.25
Vietnam	99	8.9	31%	1.54
Philippines	115	10.4	28%	1.62
TOTAL SEA	604	54.4	—	11.22

Serviceable Addressable Market (SAM)

NeuralCare's SAM comprises English, Malay, Indonesian, and Thai-speaking smartphone users aged 18–45 with diagnosed or self-identified mild-to-moderate mental health concerns, plus mid-to-large enterprises (500+ employees) seeking workforce wellness solutions. This segment is estimated at USD 2.8B across SG, MY, TH, and ID.

Serviceable Obtainable Market (SOM)

Within a 5-year horizon, NeuralCare targets 2.3% SAM capture, equivalent to USD 64M in annual revenue. This is consistent with comparable digital health platforms in analogous markets (Headspace captured 2.1% of US addressable market by Year 5; Wysa captured 1.8% of UK SAM by Year 4).

Market Drivers

Driver	Evidence
Post-pandemic demand surge	Google searches for 'online therapy' +340% SEA (2021–2025)
Employer mandate (Singapore)	National Mental Health Blueprint mandates EAPs by 2026
Smartphone penetration	82% SEA smartphone adoption rate (GSMA, 2025)
Teletherapy regulation clarity	MOH SG and KKM MY issued digital therapy guidelines (2024)
Gen Z mental health openness	73% of SEA Gen Z willing to use app-based therapy (YouGov, 2025)

AI cost reduction	LLM APIs reduce content personalisation cost by ~94% vs. human authoring
-------------------	--

Regulatory Landscape

Singapore's HSA classifies AI-driven mental health apps as Class I medical devices requiring notification (not approval), enabling rapid market entry. Malaysia's MDA follows a similar framework. Indonesia's BPOM requires registration for apps with clinical claims — NeuralCare's Indonesia launch avoids clinical claims in v1.0, filing for Class I status in Q2 2027.
