

NeuralCare AI

Product & Technology Overview

Platform Architecture & Roadmap

Confidential — For Investor Use Only

June 2026 | Singapore

Product Suite

NeuralCare delivers three interconnected products on a shared AI backbone:

1. NeuralCare App (B2C)

A mobile-first (iOS & Android) self-guided mental wellness app featuring: daily CBT micro-sessions (5–12 minutes), adaptive mood journaling with NLP sentiment analysis, breathing and mindfulness exercises, and a crisis escalation pathway that routes severe users to a licensed therapist within 4 hours. Available in English, Malay, Bahasa Indonesia, Thai, Mandarin, Tamil, Tagalog, and Vietnamese.

2. TherapyMatch (B2C add-on)

An on-demand therapist marketplace integrated into the app. NeuralCare's matching algorithm pairs users with therapists based on presenting concern, language preference, cultural background, therapist availability, and session history. Video, voice, and text-chat sessions are supported. Average wait time to first session: 2.3 hours.

3. NeuralCare for Teams (B2B)

An HR dashboard providing anonymised, aggregate workforce mental health analytics. Employers see department-level mood trends, absenteeism risk scores, and EAP utilisation rates — without any individual employee data. Includes an admin portal to manage licences, push wellness challenges, and access monthly clinical reports.

Technology Architecture

Layer	Technology
Mobile App	React Native (iOS/Android); offline-capable CBT modules
Backend API	FastAPI (Python 3.11); async; deployed on AWS ECS Fargate
AI / NLP Engine	Fine-tuned Llama-3.1-8B on 220K anonymised therapy transcripts
Crisis Classifier	Custom BERT model; 96.2% recall, 91.4% precision (clinical holdout)
Database	PostgreSQL (RDS); Redis (ElastiCache) for session state
Data Residency	Per-country S3 buckets; no cross-border data transfer
Security	AES-256 at rest; TLS 1.3 in transit; ISO 27001 audit in progress
Therapist Video	Daily.co WebRTC; end-to-end encrypted

Proprietary AI Assets

NeuralCare's core IP is its fine-tuned clinical language model, trained on a dataset of 220,000 anonymised therapy session transcripts obtained under IRB approval from SGH and IMH. The model is evaluated quarterly by our clinical advisory board against validated psychometric instruments (PHQ-9, GAD-7, PCL-5). It is NOT used for diagnosis — only for psychoeducation content personalisation and engagement nudges.

Product Roadmap — Next 18 Months

Timeline	Feature
Q3 2026	NeuralCare API v1 (third-party integrations); iOS widget for mood check-in
Q4 2026	Indonesian Bahasa full localisation; offline mode for low-bandwidth regions
Q1 2027	Wearable integration (Fitbit, Apple Watch) for physiological mood signals
Q2 2027	AI session summarisation for therapists (auto-SOAP notes); Thailand launch
Q3 2027	White-label product for insurance partners; Group therapy feature
Q4 2027	HSA Class I device application submission; research publication pipeline
