June 2026 | Singapore

## Growth Summary

NeuralCare has achieved consistent month-over-month growth since product launch in October 2024. The following metrics represent verified data from Stripe (revenue), Mixpanel (engagement), and internal PostgreSQL analytics.

## Monthly Active User Growth

| Month             | MAU    | Paying Users | MoM Growth | Revenue (SGD) |
|-------------------|--------|--------------|------------|---------------|
| Oct 2024 (launch) | 420    | 62           | —          | 9,300         |
| Dec 2024          | 1,240  | 198          | +48%       | 27,600        |
| Feb 2025          | 2,800  | 462          | +25%       | 61,800        |
| Apr 2025          | 5,100  | 842          | +21%       | 112,200       |
| Jun 2025          | 7,600  | 1,240        | +19%       | 165,500       |
| Aug 2025          | 9,800  | 1,620        | +16%       | 214,800       |
| Oct 2025          | 11,400 | 1,980        | +12%       | 261,400       |
| Dec 2025          | 12,600 | 2,340        | +11%       | 305,700       |
| Feb 2026          | 13,200 | 2,680        | +9%        | 341,200       |
| Apr 2026          | 13,800 | 2,960        | +8%        | 368,800       |
| Jun 2026 (latest) | 14,200 | 3,100        | +5%        | 383,000       |

## Engagement Metrics

| Metric                                  | Value                  | Benchmark                        |
|-----------------------------------------|------------------------|----------------------------------|
| Daily Active / Monthly Active (DAU/MAU) | 34%                    | Industry avg: 18–22%             |
| Average sessions per active user/week   | 4.2                    | Calm: 3.1; Headspace: 2.8        |
| CBT module completion rate              | 84%                    | Industry avg: ~60%               |
| 7-day retention (new users)             | 62%                    | App Store median (health): 35%   |
| 30-day retention                        | 41%                    | App Store median (health): 18%   |
| Average session duration                | 11.4 min               | —                                |
| NPS Score                               | 71                     | Best-in-class health apps: 65–75 |
| App Store Rating                        | 4.7/5 (SG), 4.6/5 (MY) | 2,840 reviews combined           |

## B2B Enterprise Traction

| Client (anonymised) | Country | Seats | Contract Value (SGD) | Signed |
|---------------------|---------|-------|----------------------|--------|
|---------------------|---------|-------|----------------------|--------|

|                                          |    |        |          |                  |
|------------------------------------------|----|--------|----------|------------------|
| Global logistics firm (Fortune 500)      | SG | 1,200  | 86,400   | Mar 2025         |
| Regional bank                            | SG | 850    | 61,200   | May 2025         |
| Tech company (Southeast Asian unicorn)   | SG | 2,100  | 151,200  | Jul 2025         |
| Government statutory board               | SG | 600    | 43,200   | Sep 2025         |

| Property developer                       | MY | 290    | 20,880   | May 2026         |
| University                               | SG | 5,000* | 180,000* | Pilot — Jun 2026 |

\* University pilot at 50% discount; conversion to full contract expected Q3 2026.

## Clinical Outcomes (Early Data)

In partnership with NUS Medicine, 340 users who completed  $\geq 8$  weeks of NeuralCare CBT modules were assessed using validated instruments. Results (preliminary, not peer-reviewed): PHQ-9 score reduction of 4.2 points on average (moderate improvement); GAD-7 score reduction of 3.8 points. Full peer-reviewed publication expected Q1 2027.
